Contents of some highly cited papers

- Buchweitz, R.-O.; Greuel, G.-M.: [The Milnor number and deformations of complex curve singularities. Invent. Math. 58 \(1980\).](#)
 - Definition of μ for arbitrary red. curve singularity

$$\mu(C, 0) = \dim_{\mathbb{C}} \omega_{C, 0} / d\mathcal{O}_{C, 0}$$

In a flat family $X \rightarrow \mathbb{C}$:

- (i) $\mu(X_0) - \mu(X_t) = \dim_{\mathbb{C}} H^1(X_t)$
- (ii) $\mu(X_t)$ constant \Leftrightarrow the family is topologically trivial.

- Buchweitz, R.-O.; Greuel, G.-M.; Schreyer, F.-O.: [Cohen-Macaulay modules on hypersurface singularities. II. Invent. Math. 88, 165-182 \(1987\).](#)
 - The hypersurface singularity $k\langle x_1, \dots, x_n \rangle / \langle f \rangle$ is of finite CM-representation type
 $\Rightarrow f$ is a simple (ADE) singularity (\Leftarrow is due to Knörrer).

Contents of some highly cited papers

- **Buchweitz, R.-O.: Maximal Cohen-Macaulay modules and Tate-cohomology over Gorenstein rings, 155 page unpublished manuscript (1987).**
 - MCM (i.e. maximal CM) modules carry a natural triangulated structure which implies that there is a naturally defined cohomology-theory attached to these modules - the Tate-cohomology.
 - Contains already MCM-approximations and many results from the next paper.
- **Auslander, M.; Buchweitz, R.-O.: The homological theory of maximal Cohen-Macaulay approximations. Mém. Soc. Math. (1989).**
 - Any f. g. module N over a commutative Noetherian local ring with dualizing module admits a CM approximation:
 - i.e. $\exists!$ a surjection $M \twoheadrightarrow N$, $M = \text{MCM}$, s. t. any other surjection from a MCM factors over M .
 - The theory (and its dual) is developed in abelian categories with a suitable subcategory of “maximal Cohen-Macaulay objects”.
